Summary

Computer Science undergraduate specializing in **full-stack** and **systems engineering**, with hands-on experience building **real-time, AI-integrated web platforms** using **React, Node.js, Express.js, and PostgreSQL**, along with **low-level systems monitoring in C**. Meta × OpenEnv Hackathon finalist with strong fundamentals in **data structures**, **operating systems**, and **distributed systems**.

Education

Indian Institute of Information Technology, Sri City — Sri City, India
B.Tech in Computer Science and Engineering; **CGPA: 9.30/10** — Expected 2028

Projects

Real-Time Project Management Platform
React, Node.js, Express.js, PostgreSQL, Socket.IO, Gemini API

- Built a **real-time collaborative productivity platform** with dynamic **Kanban boards**, live notifications, and analytics dashboards; implemented **JWT authentication** and **role-based access control (RBAC)**
- Engineered **WebSocket-driven state synchronization** via **Socket.IO**, achieving **sub-100ms** collaborative updates across concurrent sessions
- Integrated **Google Gemini AI** for automated task summarization and workspace analytics, reducing manual reporting overhead

Kernel Health Management System (KHMS)
C, Node.js, Express.js, React.js, SQLite

- Engineered a **real-time Linux kernel health monitor**: a **C agent** reads **PSI data** from /proc/pressure/cpu, context-switch counts from /proc/stat, and **D-state blocked processes**, posting live telemetry to a **Node.js/Express** backend every **2 seconds**
- Implemented validated ingestion with **SQLite** persistence (**10k-row cap**, history restore on reload) and a **React dashboard** with animated gauges and real-time metric cards
- Built a **synthetic load generator** in C (**CPU-burn** and **context-switch storm** modes) safely managed as a child process with **SIGTERM** lifecycle control and **argv-array spawning** to prevent shell injection

AI-Powered Applicant Tracking System (ATS)
React, Node.js, Express.js, PostgreSQL, Prisma ORM, Gemini API

- Designed an **AI-driven applicant tracking system** with candidate pipeline boards, recruiter scorecards, and visual analytics dashboards
- Architected **relational schemas** with **Prisma ORM** and **RESTful APIs** covering the full candidate lifecycle with **role-scoped access** at every endpoint
- Leveraged **Gemini AI** to parse resumes and compute automated candidate match scores (**0–100%**), cutting recruiter screening time

Technical Skills

Languages: Java, JavaScript, Python, C++, C, SQL
Frontend: React.js, Tailwind CSS, HTML5, CSS3
Backend: Node.js, Express.js, Nest.js, FastAPI, REST APIs, JWT Auth, Socket.IO
Databases: PostgreSQL, MongoDB, Mongoose, Prisma ORM
AI/ML: NumPy, Pandas, scikit-learn, LangChain, Gemini API, OpenAI API
Tools: Git, GitHub, Docker, Postman, QGIS, Streamlit, Swagger

Achievements

Finalist, Meta × OpenEnv Hackathon
Gold Medallist, National Science Talent Search Examination (NSTSE)
CBSE Board Topper, Class X (**97.5%**) and Class XII (**95%**), Delhi Public School, Warangal

Relevant Coursework

Data Structures & Algorithms, Object-Oriented Programming (Java), Database Management Systems, Operating Systems, Computer Networks, Probability & Statistics, Computer Architecture, Discrete Structures
